

ABOUT THE FIRM

Founded in 2018, the company stems out from WBT Teak Timbers, a firm that is renowned for manufacturing and supplying premium and certified Burmese Teak Lumbers in the Middle East for almost three decades..

It differentiates itself by supplying a range of Solid Wood Flooring, Parquet & Decking and a collection of exclusive Handcrafted Furniture. All the products are made at the firm's mills in Myanmar (Burma), a place historically associated for having one of the best infrastructure for timber processing.

Solid Teak aims to reach out directly to its end users: home & office owners, designers, architects and so on thereby providing the assurance of absolute Teak quality at fairest prices.

MISSION

To celebrate the incredible properties of the original Teak timber in woodworking.

VISION

To be largest specialized provider of woodworking items made from Burmese Teak and related species in the Middle East and Asia.

CELEBRATION OF TEAK!

The company is also a passion project whereby it hopes to re-introduce to the people the classic charm of original Burmese Teak. We at Solid Teak, take pride in providing such a product that is stood the test of time. From being used in the decking of the great Titanic , to building British settlements in Yangon to being the first preference timber in construction of various presidential Palaces, Yachts and Residential areas , Teak symbolizes robustness & elegance.

Here are a few reasons to use Burmese Teak

Naturally Grown: A hundred year old Burmese Teak Tree is grown without any external care to be much denser and durable than plantation Teak.

Furthermore, the distinct golden brown Colour associated with teak is only achieved from a naturally grown tree.

Durable : The natural oil content containing an important iron composition helps in high resistance against bacteria & termites. A well oiled & seasoned lumber is water resistant allowing it be used in the most hostile conditions.

Versatile : One of the few timbers in the world to be used in variety of applications. To name a few , Teak is used in Outdoor decking, specialized carving , indoor flooring, high end furniture and veneers.

Appeal : Teak has had a rich tradition of being used in some of the most magnificent palaces and yachts all around the world. These masterpieces are still in perfect condition even today. Not surprisingly, it is famously known as “the king of timbers”.

Sustainable : Scientific forest management and engagement in various initiatives by the authorities in Myanmar have provided sustainability in the region. Furthermore, a major restructuring of the industry in 2014, logging is undertaken in a more transparent and sustainable set up matching various international standards. Myanmar is one of the few countries in the world that uses trained elephants to procure logs as opposed to vehicles that are more prone to negatively affect the surrounding environment.

So, let's acknowledge Teak, and rejoice the enormous benefits it has to offer!

A photograph of a person wearing a hat, riding an elephant through a dense forest. The elephant is walking on a muddy path, and its trunk is visible in the foreground. The background is filled with lush green trees and foliage. The image is partially obscured by a dark blue overlay on the right side, which contains text.

TRADITION OF SUSTAINABILITY

Myanmar is perhaps one of the few countries in the world that still uses a traditional system of trained elephants for harvesting of forest logs. This provides minimum negative impact on the environment as they can penetrate areas without any major road construction otherwise required for small bulldozers. Research has shown that construction of forest roads for extraction purposes creates an alarming amount of emissions that may be detrimental to the environment in the long run. The elephants are also well looked after by the authorities by keeping them in great health and thoroughly examining them every period.

A major restructuring of the industry in 2014, logging is undertaken in a more transparent and sustainable set up matching international standards. The exports were also restricted to lumbers and related sizes. This led to significant control and streamlining of logs to be harvested every year.

In 2018, the Myanmar Forest Committee along with the active participation of PEFC, a world-renowned organization that promotes sustainable forest management, have created an initiative of dialogue and discussion of various green logging practices. Several open trust building workshops are conducted in order to make the system more complaint with international standards. This shall eventually lead to international certification and in effect transform the timber industry in Myanmar.

BURMESE TEAK FLOORING

Traditional Solid Teak flooring brings in an old--world charm to any living space. It's distinct golden colored appearance is reminiscent of flooring in old cottages, colonial architecture , traditional hotels, beach residences and so on.
