

Enhance your
Living Spaces with Teak

SOLID TEAK

Floors & more

With over thirty years of experience in the region, we at Solid Teak aim to provide timeless luxury and style of the world famous Teak wood in living spaces. Where sustainability, aesthetic appeal and functionality take precedent, our facility ensures to select only the certified high quality Teak timber logs for processing into fine solid wood flooring, parquet, decking and customised furniture.

CELEBRATION OF TEAK!

Here are a few reasons to use Burmese Teak

Naturally Grown: A hundred year old Burmese Teak Tree is grown without any external care to be much denser than plantation Teak. The high density is important as it makes the raw material more flexible in usage during processing.

Durable: The natural oil content containing an important iron composition helps in high resistance against bacteria & termites. A well oiled & seasoned lumber is water resistant allowing it be used in the most hostile conditions.

Versatile: One of the few timbers in the world to be used in variety of applications. To name a few , Teak is used in outdoor decking, specialised carving , indoor flooring, high end furniture and veneers.

Appeal: Teak has had a rich tradition of being used in some of the most magnificent palaces and yachts all around the world. These masterpieces are still in perfect condition even today. Not surprisingly, it is famously known as "The King Of Timbers".

Sustainable: Scientific forest management and engagement in various initiatives by the authorities in Myanmar have provided sustainability in the region. Furthermore, a major restructuring of the industry in 2014, logging is undertaken in a more transparent and sustainable set up matching various international standards. Myanmar is one of the few countries in the world that uses trained elephants to procure logs as opposed to vehicles that are more prone to negatively affect the surrounding environment.

A low-angle photograph of a large, mature tree trunk in a forest. The tree trunk is the central focus, extending from the bottom left towards the top right. The bark is textured and shows signs of age. The surrounding forest is lush with green foliage, and the sky is visible through the canopy. The word "CELEBRATION" is written vertically in white outline text on the right side of the image.

CELEBRATION

T&G FLOORING

T&G Flooring

Traditional Solid Teak Tongue & Groove (T&G) flooring brings in an old world charm to living spaces. It's distinct golden coloured appearance is reminiscent of flooring in old cottages, colonial architecture, traditional hotels, beach residences and so on. Our flooring is available as unfinished as standard that can be finished to a number of polishes, shades and effects. It's rich golden brown colour coupled with dramatic mixed grains provides a luxurious decor that can last for generations with minimal care.

Specifications:

Thickness: 11 / 15 / 17 / 22 / 25 mm

Width: 70 / 73 / 90 / 95 / 120 mm

Length: 300 – 750 / 900 – 1650 mm

DECKING

DECKING

Historically, Teak was first used in decking of ships and yachts. This owes to a unique chemical composition within the wood that helps in withstanding hostile conditions of extreme heat and rain. Subsequently, it has been a preferred timber for outdoor household areas that include swimming pool, patio, garden, beachfronts and so on. Our Teak Decking comes as unfinished with natural dramatic grains with different dimensions. The style is either ribbed (anti-slip) or flat surface depending upon the project requirements.

Specifications:

CLADDING

In construction, Teak wall or ceiling cladding is used not only as a protective layer owing it to natural properties but also to enhance the appearance of the project itself. From modern sleek walls of a villa in a rainforest to rustic ceilings of a historic palace, Teak wood cladding is a preferred choice by most designers.

TEAK
COLLECTIONS

CUSTOMISED DOORS

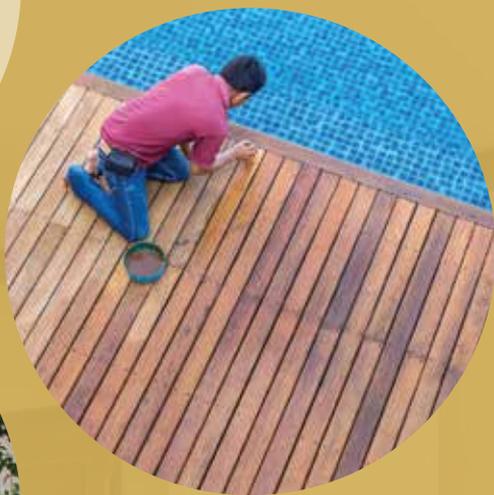

We manufacture Teak solid wood and veneer doors on a custom order basis. Owing to generations of experience, our craftsmen hand pick only the best quality sawn timbers for maximum productive output. Door designs range from plain to panel to carved whilst using additional features such as glass or aluminium and so on.

INSTALLATION & FINISHING

INSTALLATION RECOMMENDATION

We suggest using skilled craftsmen to facilitate seamless integration of solid wood flooring and decking. Refer to the layout below for an easy outline on how to install solid teak flooring.

FINISHES

Although simple sanding improves the surfacing of a Teak wood Floor, an extra finish with oil or lacquer provides an additional layer of protection, improves longevity and enhances its overall appearance.

TYPES OF FINISHES

There's a wide selection of oil-based and polyurethane finish that can be used. For the best outcomes, we suggest applying a spray-based lacquer with a matt finish for indoor solid teak flooring. With regard to Outdoor decks, oil, and wax-based guards made by a reputable brand can be used for best protection.

TRADITION OF SUSTAINABILITY

Myanmar continues to have a traditional system of trained elephants for harvesting of forest logs. This provides minimum negative impact on the environment as they can penetrate areas without any major road construction otherwise required for small bulldozers. Research has shown that construction of forest roads for extraction purposes creates an alarming amount of emissions that may be detrimental to the environment in the long run. The elephants are also well looked after by the authorities by keeping them in great health and thoroughly examining them every period.

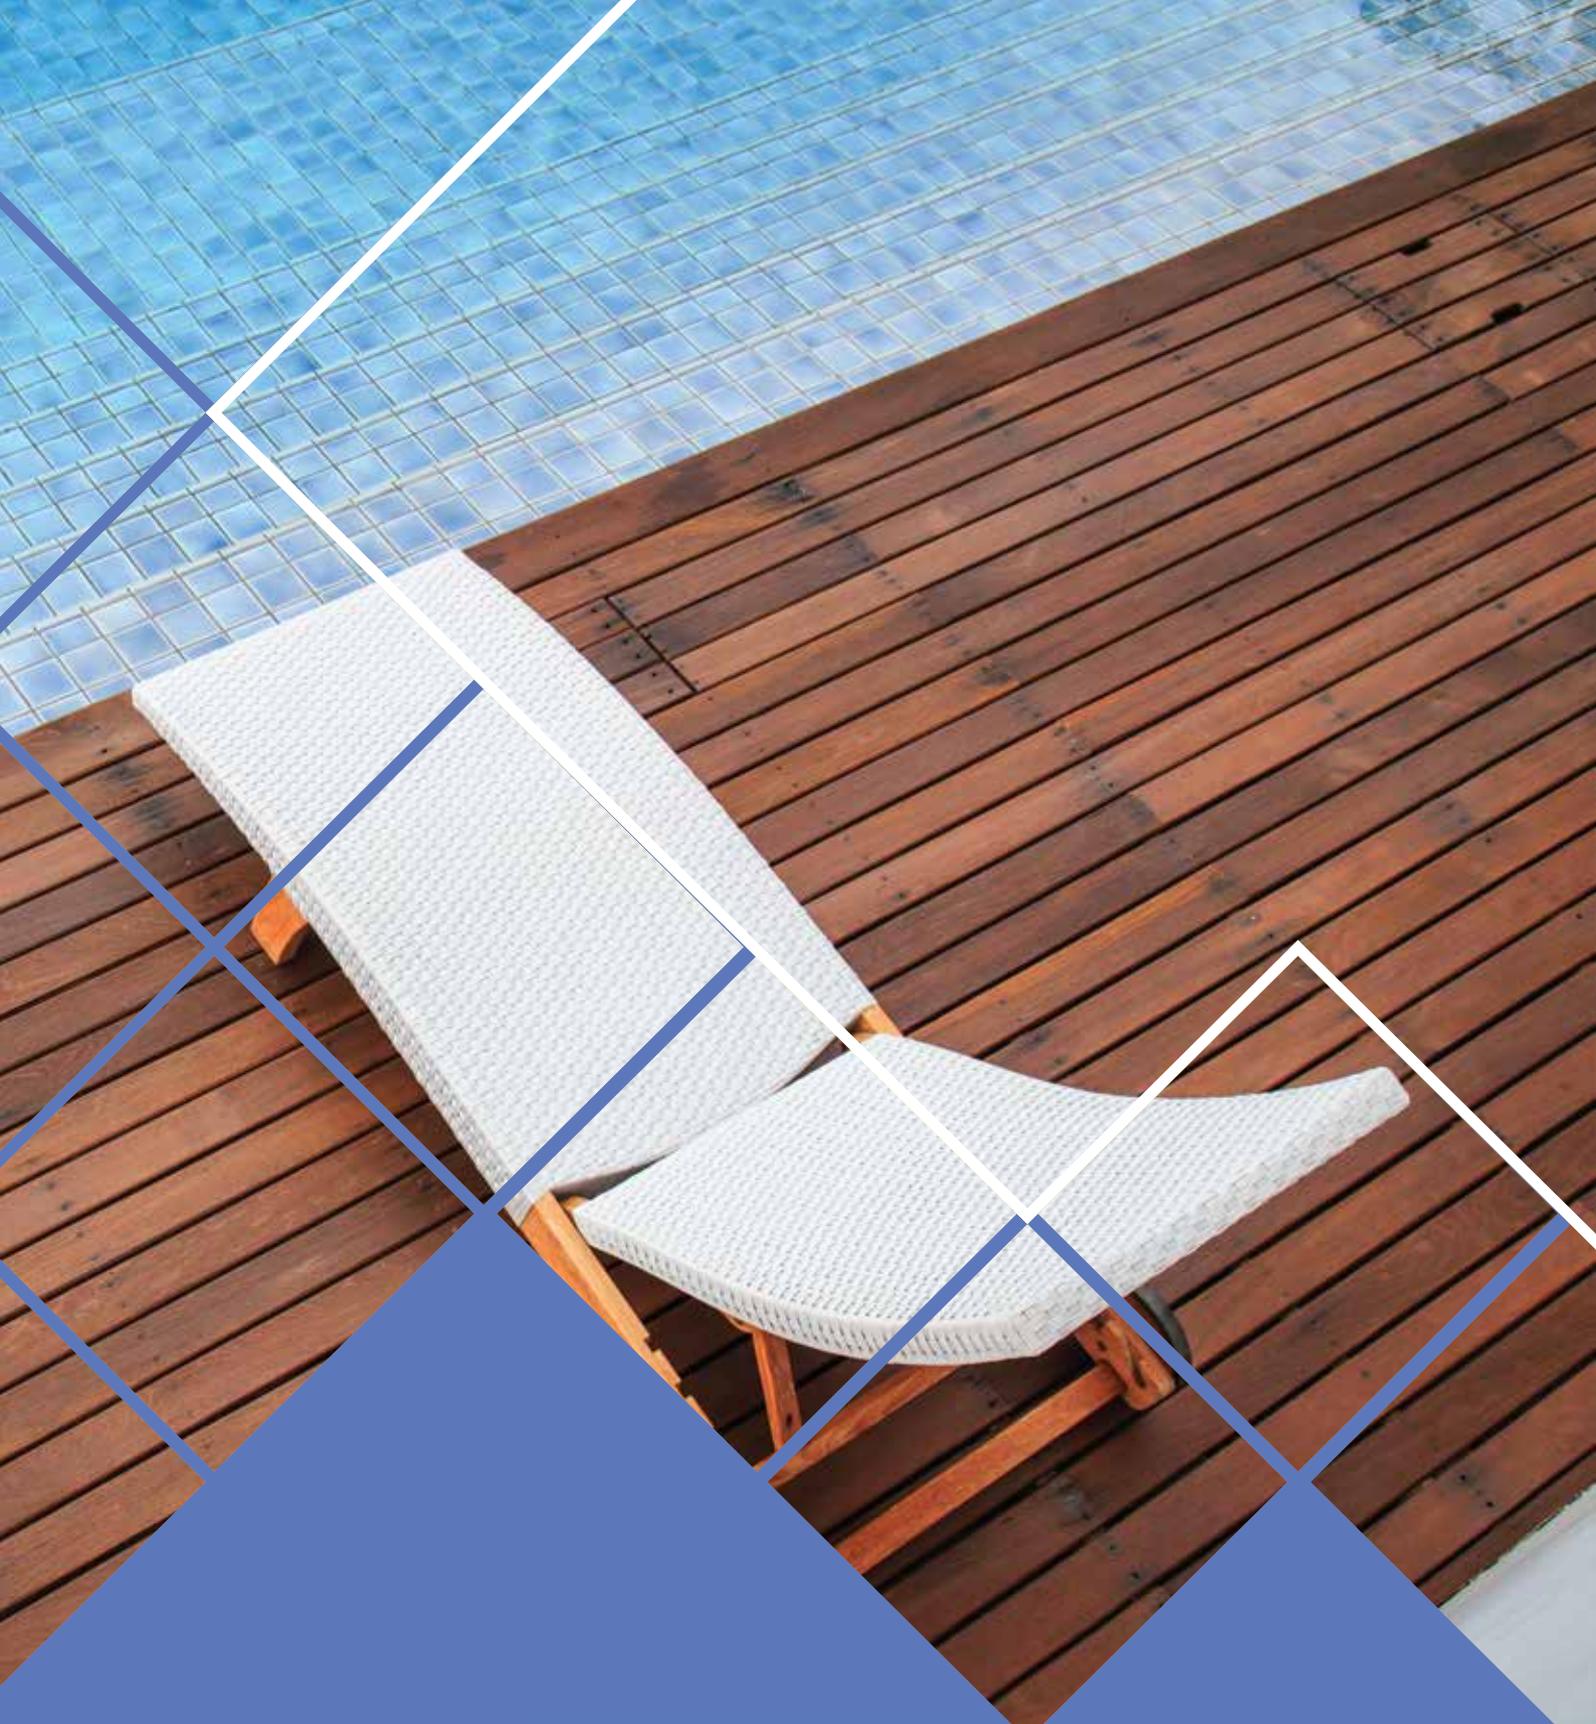

A major restructuring of the industry in 2014, logging is undertaken in a more transparent and sustainable set up matching international standards. The exports were also restricted to lumbers and related sizes. This led to significant control and streamlining of logs to be harvested every year.

In 2018, the Myanmar Forest Committee along with the active participation of PEFC, a world-renowned organisation that promotes sustainable forest management, have created an initiative of dialogue and discussion of various green logging practices. Several open trust building workshops are conducted in order to make the system more complaint with international standards. This shall eventually lead to international certification and in effect transform the timber industry in Myanmar.
